**Discussion Under Rule 98** 

U.S. Patent 6,180,806 to O'Lenick et al covers glyceryl phosphobetaines. These

compounds do not contain the critical ester linkage. This linkage turns out to be critical

for biodegradation. Additionally, there is no way to incorporate the polyoxyalkylene

groups into the molecules covered by the 6,180,806 technology.

U.S. Patent 6,331,293 to Smith et al covers dimer based phospholipids. These

compounds, like the '806 patent, do not contain the critical ester linkage. This linkage

turns out to be critical for biodegradation. Additionally, there is no way to incorporate the

polyoxyalkylene groups into the molecules covered by this technology.
